

VENTURE GLOBAL LNG

Project	Venture Global LNG, Inc.
Document Title	Information Exchange Requirements Specification
Document Number	VG-000000-INF-SPC-VGL-00003 (This document number supersedes CP-000000-INF-SPC-VGL-00001)
Document Type	SPC - Specification
Owning Department	Information Management
Expiry Date	None
Security Classification & Disclosure	
☐ CONFIDENTIAL – Information that is subject to confidentiality obligations, is of a high value or sensitivity, or should be shared with specific authorized persons <u>only</u> . See security classification matrix in Hexagon for list of authorized users ☐ SSI Sensitive Security Information **ANY AND ALL DOCUMENTS REQUIRING AN SSI SECURITY CODE WILL BE CREATED ON TEMPLATE VG-000000-DMG-TEM-VGL-00012** Information about security, operations, facilities, or other assets or capital projects whose disclosure would be detrimental to the security of transportation, transit employees or customers ☒ COMPANY USE - Information is to be secured from public access and is intended for use only by Venture Global LNG (VG) personnel; consultants or contractors that have a need to know and are subject to appropriate confidentiality obligations; and/or regulatory and governmental agencies ☐ CEII Critical Energy Infrastructure Information . Specific engineering, vulnerability, or detailed design information about proposed or existing critical energy infrastructure ☐ PUBLIC - Information that is publicly available or has been specifically approved for public release

Revision Modification Log

History: This document will be reviewed for effectiveness: ☐ Pipeline 49 CFR 192 Operational Manuals/Written Procedures: every year not to exceed 15 months ☐ LNG Facility 49 CFR 193 Operational Plans, Procedures, and Manuals: at an interval not exceeding 27 months, but at least once every 2 calendar years, or when a Component is changed significantly, or a new component is installed ☐ All other documentation: Every three (3) years and either issued as a new version or reaffirmed by the Document Owner. The Valid date on the cover page of this Document represents the date by which the review must be completed. The following represents a summary of the changes made to this current revision of the document since the last revision.		
Page No.	Section	Description
6, 7	3	Added SPIL, SPIR, and CMMS terms
10	6	Added Spare Parts Listing to the VGLNG Information Management Requirements
33	17	Updated section description to include numerous VGLNG templates
33	17.2	Added Spare Parts Listing template
34	21	Added Spare Parts Listing template to References section

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

1 PURPOSE

This document is applicable to all Venture Global LNG (VGLNG) employees. The primary audience for the Information Exchange Requirements Specification (IERS) are such employees and Third-Party Contractors that have engaged with VGLNG to perform Consultant, Contractor and/or Supplier roles via any VGLNG personnel. Herein after in this specification Venture Global LNG will be referred to as VGLNG and these organizations will be referred to as Third Party(ies).

Third Parties may each have an internal Document Control System to meet their company standards and requirements. VGLNG and Third Parties' systems do not directly interface with each other. VGLNG's Information Management System (EDMS) will serve as the "Office of Record" for the collection, retrieval and distribution of documentation for VGLNG. The use of the EDMS as the "single source of the truth", is essential for VGLNG to manage information effectively.

This specification identifies the work practices to be followed for the centralized capture, issue, distribution and review of all incoming and outgoing information produced by or on behalf of Venture Global LNG.

2 OBJECTIVE

The objective of this specification is to provide the Venture Global LNG requirements to VGLNG employees and Third Parties for the exchange and delivery of information to VGLNG.

3 DEFINITIONS & ABBREVIATIONS

The following is a list of abbreviations and definitions found in this document.

TERM	DESCRIPTION
Controlled Document	Controlled documents are records and represent information created on any media, received, and maintained as evidence and information by an organization or person, in pursuance of legal obligations or in the transaction of business
Uncontrolled Document	Documents / Files that do not serve as a business function or do not record a business activity and are not required for compliance with VGLNG records retention policies
QA	Quality Assurance
TPDC	Third Parties Document Control
EDMS	Information Management System
Third-Party Contractor	Entity that has engaged with VGLNG to perform Consultant, Contractor and/or Supplier roles via any VGLNG personnel directly
VGLNG	Venture Global LNG
IERS	Information Exchange Requirements Specification
EDMS	VGLNG Information Management System (Hexagon SDx)
SPIL	Spare Parts Interchangeability List

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

TERM	DESCRIPTION
SPIR	Spare Parts Interchangeability Record
CMMS	Computerized Maintenance Management System

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

4 ROLES AND RESPONSIBILITIES

Below is a summary of the various groups that are involved in the delivery of documentation.

4.1 Venture Global LNG Document Control Team (VGLNG DC)

VGLNG DC has the accountability for document receipt; quality assurance (QA); expediting; distribution to internal VGLNG team members; transmittals to Third Parties; KPI/Metric reporting; and receipt of final handover to Operations from Project Team for the VGLNG Projects.

4.2 Venture Global LNG Document Control Standards

Third Parties shall deliver information to VGLNG in accordance with the following Document Control standards.

4.3 Third Parties Document Control (TPDC)

As applicable, TPDC has the accountability to deliver documentation to VGLNG while:

- Adhering to VGLNG's Information Management (IM) Standards for the management of Company information
- Performing internal QA on documentation and associated attributes prior to the delivery to VGLNG
- Delivering required documentation into VGLNG's EDMS or through an approved submittal process
- Providing submittals that accompany the delivery of information to VGLNG
- Supplying required attributes that accompany the submission of documents to VGLNG
- Warranting that the document formats comply with VGLNG specifications and procedures
- Ensuring that the VGLNG document numbering is applied on documentation in accordance with VGLNG's document numbering requirements
- Obtaining signatures for the documentation as required
- TPDC will ensure the documentation produced by the Third Parties meets VGLNG's requirements
- TPDC will follow their internal document control processes, procedures and systems utilized for the management of documentation in alignment with the VGLNG's requirements
- Identify a primary Document Control point of contact and/or Project-specific mailbox for VGLNG email communications

4.4 Third Party Document Originators

Third Party Document Originators are accountable to:

- Use document templates and document formats provided by VGLNG
- Place VGLNG document numbers on the face of the documents

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

- Apply VGLNG revision code, VGLNG revision states and revision dates and VGLNG Security Classification on the face of the documents
- Place a clear and unique title on the document reflective of the document contents and purpose

4.5 Responsibility Comparison (VGLNG / Third Party)

VGLNG (VGLNG DC)	THIRD PARTY (TPDC)
Assure delivery of documentation in accordance with VGLNG Requirements	Deploy appropriately skilled resources to manage and deliver documentation and data
Set and communicate standards and templates	Adhere to VGLNG standards and use VGLNG templates
Utilize VGLNG applications & systems	Utilize Third Party applications & feed VGLNG applications & systems
Receive MDRs from Third Parties	Maintain and deliver the Third Party MDRs
Maintain Document Distribution Matrix (DDM) for VGLNG recipients	Maintain Document Distribution Matrix for Third Party recipients
Receive information	Deliver information

5 THIRD PARTY DELIVERY TO VGLNG

For the management of controlled documents, VGLNG will utilize their Information Management System (EDMS) to store, perform revision control, review, comment and distribute VGLNG documentation. The EDMS will be utilized by Third Parties to exchange documentation unless other processes have been agreed with VGLNG DC.

Document “VG-000000-DMG-GUI-VGL-00005, Contractors How-To Submit and Receive Project Documents via Hexagon SDx” will be provided to Third Parties following initial engagement. This guide outlines the steps for the transfer of information. Third Party representatives that will be supplying documentation to VGLNG through the EDMS will be provided user accounts for access.

For information regarding delivery sizes of documentation, please refer [Section 7.19 File Sizes](#) below.

Document exchange will not be accepted by VGLNG via other methods (i.e. E-mail, FTP, Memory Sticks, DVD's, etc.) unless previously agreed by VGLNG DC in advance.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

6 VGLNG INFORMATION MANAGEMENT REQUIREMENTS

The VGLNG IM Standards contain requirements for Third Party delivery to VGLNG:

Venture Global LNG IM Standards	
VG-000000-INF-SPC-VGL-00002 CP-000000-DMG-SPC-VGL-00001	Documents for Operations (DFO) Specification Documents for Operations (DFO) Specification
VG-000000-DMG-PCD-VGL-00001	Document Numbering Procedure
VG-000000-INF-PLN-VGL-00001	Information Management Plan (IMP)
VG-000000-INF-SPC-VGL-00001	Tagging Specification
VG-000000-INF-GUI-VGL-00003	Hexagon SDx RFI Process
VG-000000-MMS-SPR-VGL-00001	Spare Parts Listing

7 CONTROLLED AND UNCONTROLLED CONTENT

This specification addresses the management of documentation and files (Hereinafter referred to as Documents). Documents are classified into two high level categories: Controlled and Uncontrolled.

7.1 Controlled Documents

7.1.1 Technical Information

- Technical documents are originated by: Engineering, Supplier, Fabrication and Construction. Examples of Technical documents include: Drawings, P&IDs, PFDs, Data sheets, Specifications, calculations, etc.
- Models and Simulations are computer files used to analyze or simulate some aspect of a facility or part of a facility. They usually require specific software to interpret them. Examples include: 3D design model in PDMS, the Intergraph Smart Plant Instrumentation, etc. The files supporting these models will be delivered to VGLNG as part of the total “information set” and are considered controlled documents
- Video/Digital Photos of activities (Ex: Installation, construction) become records of the business activities on a project and must be delivered to VGLNG as part of the controlled record set
- Databases - The Databases that have been created in support of VGLNG’s needs should be extracted into an agreed upon format and provided to VGLNG. Examples of these databases are: Smart Plant Instrumentation (i.e. SPI, formerly INtools), Aspen Hysys, SKM Power Tool, Third Party tag registers, etc.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

7.1.2 Non-Technical – Project Management and Business Information

- Non-Technical document examples include: Project Execution Plans, Stage Gate deliverables, Reports, Procedures, Project Plans, Schedules, Forecasts, Budgets, Invoices, etc.
- Correspondence types are considered to be records and are to be retained. Examples include: Letters, Transmittals, Memorandums, Minutes of Meetings, Action Items, etc.
- Correspondence is required should the subject matter meet one or more of the following criteria:
 - An instruction to a Third Party is needed
 - A decision by the Company is needed
 - Compliance issue with Contract
 - Schedule, Cost conflict

7.2 Uncontrolled Documents

VGLNG employees will inevitably generate documents that are considered to be Uncontrolled. To determine if a file is Uncontrolled it should meet the following criteria:

- A draft or a version of a file prior to the approved, accepted, or final state
- A document that is not a transaction of business or compliance activity
- A document that does not meet the definition of a Record
- A reference document that is controlled by external parties

Examples of Uncontrolled Documents include:

- Working preliminary documents
- Employee recreational announcements
- Personal files with no business purpose
- Vacation Calendars
- Documents that are not formally issued to others

Uncontrolled documents that are in a draft or non-approved state should include the state of “Draft” or “Preliminary” on the face of the documents as a watermark across the document pages.

Reproductions (digital, prints or copies) of original documents are considered to be uncontrolled documents (also known as convenience copies).

7.3 Document Security

Documentation may be shared (by VGLNG) with others when it is in the interest of VGLNG and when it is legal to do so. Information held by Third Parties on behalf of VGLNG shall be secured and not shared with others unless contractually approved by VGLNG to do so.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

The documentation originated for or on behalf of VGLNG is owned by VGLNG unless contractual agreements state otherwise. This Information shall be protected against loss or unauthorized access through appropriate procedures and systems.

In any form or media, sensitive information held by VGLNG should be classified and secured to prevent any unauthorized use.

7.4 Security Classifications

Security Classification	Description
PUBLIC	Public Information: Information that is not owned by VGLNG or has been specifically approved for public release. Generally, this is information that can be made public without any negative implications to VGLNG
COMPANY USE	All information within VGLNG (generated by VGLNG or Third Parties) is considered for COMPANY USE unless it specifically coded as Public or Confidential Access to COMPANY USE documentation shall be limited to authorized VGLNG personnel during the life of the project COMPANY USE information will be secured from public access. This information is intended for use by VGLNG Personnel, Partners, Regulatory and Governmental Agencies
CONFIDENTIAL	VGLNG Confidential information is information of a high value or sensitivity. The disclosure, modification, misuse, or destruction of VGLNG Confidential information may be prejudicial to the interests of VGLNG employees and may result in reputational damage and/or contractual implications CONFIDENTIAL information should be shared with specific authorized persons <u>only</u> as it could harm the interests of a group, company or individual if disclosed to unauthorized persons
SSI	SSI Sensitive Security Information. Information about security, operations, facilities, or other assets or capital projects whose disclosure would be detrimental to the security of transportation, transit employees or customers
CEII	Critical Energy Infrastructure Information. Specific engineering, vulnerability, or detailed design information about proposed or existing critical energy infrastructure

Documentation generated by or for VGLNG shall contain the Security Classification on the face of the document. Third Parties may maintain their own numbering system for documents to meet their specific company requirements.

Note: VGLNG's preference is that the Third Parties utilize the VGLNG document numbering schema in lieu of a Third Party specific document number to eliminate the challenges associated with documents containing multiple numbers.

At the point that documents are originated and become formally part of VGLNG's documentation, the VGLNG document number must be assigned in accordance with VGLNG's Document Numbering Procedure. The Document Numbering Procedure applies to the numbering of ALL document deliverables generated by or for VGLNG.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

All document numbers shall be displayed clearly on the face of the documents and identified as: VGLNG document number, and Third Party document number as applicable.

Important Note: Documents containing text boxes (i.e. those containing VGLNG Document Numbers) and/or stamps or mark-ups shall be flattened by Third Parties to embed the information in the PDF file prior to delivery to VGLNG.

Tip: Flattening a PDF document containing text boxes, mark-ups or stamps will ensure that mark-ups are always visible on the document when it is printed.

7.5 Document Titles

All Documents should contain clear, meaningful and unique Titles. The Document Titles on the face of the documents shall match the Title attribute that is entered in VGLNG's EDMS. Abbreviations should not be used in Document Titles. Document Titles should not exceed 150 characters.

Titles should not contain identifying Third Party names.

Note: References to the Third Party that originated the document may be included in the Revision history block.

7.6 Master Document Register

Third Parties shall submit a Master Document Register (MDR) to VGLNG. The MDR should be submitted as individual MDRs based upon the document category. Examples of individual MDRs by high level document category are:

- 1) MDR for Technical & Non-Technical Documents
- 2) SMDR for Supplier documents

For Third Parties utilizing an Electronic Document Management System (EDMS) the MDR should ideally be an extraction from the Third Party EDMS and into the MDR template for transmission to VGLNG. The extraction from an EDMS system into the MDR template will ensure the accuracy and completeness of the information versus an MDR that is manually populated by typing the information in each cell. The MDR EDMS information shall be maintained.

The MDR and SMDR will be submitted in VGLNG's specified MDR template Excel format along with a rendered PDF version of the MDR every two weeks, as applicable.

The MDR(s) shall contain the full listing of documentation that the third party has submitted and is planning on submitting to VGLNG. Only the most recent revision shall be tracked on the MDR main tab. Third Parties may include a "historical" tab for previous revisions submitted if they chose. The MDR will be used to manage documents and associated attributes and track progress and changes.

The MDR shall be maintained by the Third Party DC and will be issued to VGLNG DC as additions and/or changes are made to VGLNG documents.

Third Parties may maintain internal document registers; but at the point where a Third Party document is shared with other VGLNG employees or it becomes a formal record it must be referenced in the MDR.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

7.7 Document Distribution Matrices (DDM)

Third Parties are encouraged to maintain their own internal Document Distribution Matrix (DDM) for distribution of documents within their company. The VGLNG DC team will transmit documents to the TPDC to be distributed to the team members within their organization.

The Distribution of documents submitted by Third Parties to VGLNG employees will be handled by the VGLNG DC.

7.8 Changing Document Numbers

If Third Party changes document numbers on documents that have previously been issued to VGLNG, the original document shall be superseded (see [section 7.9](#) below on superseding documents). The document with the new document number will be issued to VGLNG as a new document (not previously received).

The MDR will be updated to reflect both the superseded document and the new document number.

Due to the impact caused by the renumbering of documents, Third Parties are encouraged to perform a quality check of the document number assignment to ensure it aligns with the VGLNG Document Numbering Procedure.

7.9 Voiding / Superseding Issued Documents

VOID - If an issued document has been provided to VGLNG and it is no longer valid, the document may be voided. The document will be updated to show the word VOID across all pages of the document (preferably with a watermark). The document shall receive a new VGLNG revision, revision date showing the date it was voided the Revision shall be updated to "X" and the Revision State shall be updated to reflect "Void".

The revision modification Log should be updated to state why the document as voided. The document shall be formally transmitted to VGLNG. The MDR will be updated to reflect the VGLNG Revision Status of the document as VOID.

SUPERSEDED - If an issued document has been provided to VGLNG and is being replaced by a "new" document with a different document number, the original document has the revision state changed to "Superseded". The document will be updated to show a watermark stating: SUPERSEDED BY XXXXX across all pages of the document (Where XXXXX is the new document number that is replacing the original document.) The superseded document shall receive a new VGLNG revision number "X", revision date showing the date it was superseded and the Revision State shall be updated to "Superseded". The document shall be formally transmitted to VGLNG.

The document that has superseded the previous document shall reference the document number that it has replaced on the cover page with a statement that says "SUPERSEDES Document number "XXXX" on all the subsequent revisions for the rest of the document's lifecycle. The superseding document shall begin with the next revision in sequence from the superseded document.

Both the superseded and superseding documents shall be included on the same submittal load sheet on their own without additional documentation. Multiple Discipline and Document types are allowed in the superseding process on a single submittal load sheet.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

The MDR will be updated to reflect the VGLNG Revision Status of the document as Superseded.

7.10 Cancelling Document Numbers

When a document will not be delivered as planned on the MDR, the Third Party shall update the MDR to show the document number has been cancelled. The Revision State field shall be updated from “Planned” to “Cancelled” to show the document number is cancelled.

Note: Cancelled document numbers should not be reused or deleted from MDR.

7.11 Document Submittals

All documents delivered to VGLNG by Third Parties shall be issued under cover of a VGLNG submittal template, VG-000000-DMG-TEM-VGL-00007, and loaded in to VGLNG’s EDMS. Document submittals are the means by which the transactions between Third Parties and VGLNG are captured in an audit trail.

Submittals will be submitted from Third Party to VGLNG electronically. Contents of a Submittal will be issued for the same Distribution Purpose and Discipline.

The Submittal to VGLNG from Third Party will include the following:

- Listing of all documents that are being delivered to VGLNG, segregated on separate submittals by Discipline & Document type.
- VGLNG Document number
- Document Title - For each document on the submittal
- VGLNG Revision - Shall match the Revision on the physical documents being submitted
- VGLNG Revision State - (Reference: [Section 7.14.5](#)) also known as “reason for issue”
- Issue Date - The date each submitted document is uploaded in to VGLNG’s EDMS.
- Issue Purpose: Revision Code and the Revision State (i.e. Issue Purpose) exist independently of one another without a prescribed one-to-one correlation. All documents delivered to VGLNG must contain a Revision Code.
- Reason for Issue – Submittal form in VGLNG’s EDMS shall state the Reason for Issue. The Reason for issue will clarify the action that VGLNG shall take upon receipt of the documents. (Examples of Distribution Purposes include: Review and Information.)

In the case that a request for document submittals has been made by TPDC and approved by VGDC that deviates from this process and an external drive is used to transfer the data, the drive must be sent and addressed to the VGDC team and not to the project engineers directly. If sent by mail, the delivery must require signature upon receipt.

Any deliveries of project documentation must be coordinated with VG DC prior to submission. Any deliveries not addressed to VG DC will not be considered as official submissions.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

An index of the external drive contents carrying a VG document number must be submitted via a Hexagon submittal for traceability. The same index should be included in the external drive contents, named after the VG document number.

7.12 General Submittal Guidelines

It is the Third Party responsibility to capture and track VGLNG's submittal number generated for each submittal by VGLNG's EDMS.

- The Submittal Number should be added to the filename for the submittal load sheet used
- Special characters shall not be used in the file name of the submittal, including extra spaces and long dashes (e.g. ! " # \$ % & ' () * + , - / : ; < = > ? @ [\] ^ _ ` { | } ~ °)

If a submittal is rejected, the Third Party must correct and re-submit and the VGLNG's EDMS will create a new submittal number.

- It is the Third Party responsibility to track, revise and resubmit submittal that have been rejected by VGLNG
- Submittals may only include documents with the following:
 - Like Revision States
 - Like Discipline
 - Like Document Type
- Third Party should not issue the next revision of a document or drawing if a previous revision is still under review by VGLNG. The previous revision of the documents review cycle must be complete and the document returned to the Third Party before the next revision of the document is submitted to VGLNG
- Third Party shall not issue multiple revisions of a document or drawing at one time

7.13 Document Count on Submittals

When submittals are received VGLNG DC will distribute these to the VGLNG employees based upon groupings of the documents on the Third Party submittals. Maintaining submittals with manageable grouping sizes will ensure that the recipients can easily assimilate the documentation. Based on the Revision State and Discipline, Third Parties should submit document counts according to the following guidelines:

- Issued for Review
 - The ideal number of documents to be included on an "Issued for Review (IFR or IFA) submittal" is no more than fifteen (15) documents. VGLNG's EDMS does not impose a limit to the number documents per submittal. If total documents submitted per submittal exceeds 100 VGLNG DC will batch in quantity of 100 when send out for review and when returning to Third Party.
 - When submittals are received by VGLNG as "Issued for Review", the VGLNG DC routes these documents to the VGLNG reviewers based upon the grouping of the documents on the Third Party submittals. If total documents submitted per submittal exceeds 100 VGLNG DC will batch in quantity of 100 when send out for review and when returning to Third Party.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

- Each document on each submittal will be QA/QC'd. If a rejectable offense is revealed the entire submittal package will be rejected. VGLNG DC may stop their QA/QC process with the first rejectable offense. Third Parties DC shall QA/QC entire submittal package before resubmitting.
- Issued for Information, Construction, Design, etc.
 - The ideal number of documents to be included on an "Issued for Information/Construction/Design submittal" is no more than fifty (50) documents. VGLNG's EDMS does not impose a limit to the number documents per submittal. If total documents submitted per submittal exceeds 100 VGLNG DC will batch in quantity of 100 when send out for information.
 - Each document on each submittal will be QA/QC'd. If a rejectable offense is revealed the entire submittal package will be rejected. VGLNG DC may stop their QA/QC process with the first rejectable offense. Third Parties DC shall QA/QC entire submittal package before resubmitting.

7.14 Document Revisions

Document Revisions will be assigned to all documents transmitted to VGLNG unless agreed by VGLNG in writing.

Note: Exceptions may be made for revision numbering of Correspondence documents including: Emails, Transmittals, Letters, and Minutes of meetings.

The Revision is an alphanumeric string identifying the document revision. It is also commonly known as the document revision number. Each time a document is changed or re-issued, it shall be assigned a new revision code. The revision code is not part of the document number.

For each document there will be a VGLNG Revision, Revision State, and Revision Date assigned. The Revision Date is the date that the Revision Number/State is assigned to the document.

Revisions are NOT TO BE DUPLICATED. Example: Once a new document has been set to Revision A - (Issued for Review and Approval) it shall not be reused as Revision A, IFI (Issued for Information). The next available revision shall be used.

Revisions are single characters unless a two digit numeric revision is next available. Example, Revision 10 or a review of an final document, example, Revision 0A

The Document Revision States (Reference: [Section 7.14.5](#)) shall be applied consistently. Third Parties will ensure that the documents issued to VGLNG utilize a choice from the Revision States Listing. Documents not using a Revision State choice from this list will be rejected by VGLNG.

7.14.1 Applying Revision Codes to New and Early-Stage Documents

Alphabetic Revision Codes (A, B, C, etc. except X) are typically used during the early stages of a document or during the internal lifecycle of a document prior to it being finalized.

Examples of document revision states where Alphabetic revision codes would be used include: Draft, Issued for Review, Issued for Approval, Issued for Information, etc.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

If a document is Cancelled, Superseded or Voided, the revision of the document should be updated to reflect revision code "X".

7.14.2 Applying Revision Codes to Final Documents

For example, documents bearing revision statuses of Issued for Construction, Issued for Fabrication, Issued for Purchase, As-Built, Issued for Record, etc. generally carry numeric revision codes 0-99.

Numeric Revision Codes are to be applied on documents that are deemed final at the time of issuance. Examples of document revision states where Numeric revision codes would be used include: Issued for Construction, Issued for Fabrication, Issued for Purchase, As-Built, Issued for Record, etc.

Numeric Revision Codes shall not be skipped. TPDC shall not issue Rev 0 and then Rev 2.

7.14.3 Applying Revision Codes to Revised Final Documents

When a document has reached an acceptance stage (Issues for Construction or Issued for Design) and if a review stage is required due to a major change, the numeric revision can be supplemented with an alpha character, i.e. 0A, 0B or 1A, 1A, 1B, 1C, etc., and then Re-issued for Review.

7.14.4 Revision Date Format

The revision date format of DD-MMM-YYYY should be applied across all documentation prepared for VGLNG.

7.14.5 Revision Information during a Document Lifecycle

The Revision Code and the Revision State (i.e. Issue Purpose) exist independently of one another without a prescribed one-to-one correlation. All documents delivered to VGLNG must contain a Revision Code.

The table below demonstrates one example of a technical document lifecycle. The state of the document is captured by applying the Revision Code and Revision State. Documents may follow different lifecycle stages depending upon the type of document, the level of review, the type and volume of comments received, and the authorization process for each new revision.

EXAMPLE: TECHNICAL DOCUMENT LIFECYCLE:

Revision Code	Revision State (Issue Purpose)	Revision Date
A	Issued for Review	16-May-2018
B	Issued for Review	19-May-2018
C	Issued for Approval	16-May-2018
0	Issued for Design or Issued for Construction	16-May-2018
1	Revised Issued for Construction	16-May-2018

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

2	As-Built	16-May-2018
X	Cancelled, Superseded by, or Voided	16-May-2018

NOTE: Documents are NOT required to be submitted at the above Revision States in the exact order as they appear in the table; these are just examples. If a document is submitted as IFR, and VGLNG returns it as Code 1 or Code 2, the document can be revised and resubmitted as the next Numerical revision and its appropriate Revision State

The table below demonstrates examples of the various Revision States and shows which would typically be an **alphabetic** revision code and what would typically be a **numeric** revision code.

EXAMPLES: USE OF REVISION CODES

Revision Code	Revision State / Reason for Issue
Alpha Revisions	DRT - Draft IFB - Issued for Bid HAZ - Issued for HAZOP IFR - Issued for Review IFA - Issued for Approval IFP - Issued for Permit IFI - Issued for Information (If later revision of this document is expected) IPL – Issued for Plant Layout FER – Issued for FERC
0	IFI - Issued for Information (If no further revisions of this document are expected) IFC - Issued for Construction IFD - Issued for Design IFP - Issued for Permit PUR - Issued for Purchase INS - Issued for Installation IFU - Issued for Use FAB - Issued for Fabrication REC - Issued for Record FER – Issued for FERC
0A, 0B, 0C, etc.	IFR - Issued for Review IFA - Issued for Approval <i>(Should a change to a final doc./dwg require a review, the final numerical revision should be supplemented with an alpha revision)</i>
1	IFC - Issued for Construction IFD - Issued for Design IFP - Issued for Permit PUR - Issued for Purchase INS - Issued for Installation IFU - Issued for Use FAB - Issued for Fabrication REC - Issued for Record

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

Revision Code	Revision State / Reason for Issue
2 (or Next Available Num. Revision)	ASB - As-Built
Next Numeric Revision	Subsequent updates following As-Built or As-Supplied
X	SUP, VOI - Cancelled, Superseded by, or Voided

7.15 Revision Modification Log

All revision 0 or higher, revised multi-page documents, such as procedures, reports, specifications, etc. shall contain a Revision Modification Log if the document has been revised. The Revision Modification Log should contain a reference for revision changes noting what has changed.

If a document title changes, it must be noted in the Revision Modification Log.

Grammatical corrections are not required to be recorded on this log.

FD7 Documents for Operations (DFO) deliverables do not require a revision modification log for native file updates.

Page No.	Section	Change Description

7.16 File Formats

7.16.1 Drawings

As-Built drawings shall be delivered to Owner in the native CAD format. As-Built drawings are considered final documentation and must be also submitted with a rendered PDF file at deliver.

7.16.2 Scanned Documents

Where a document cannot reasonably be obtained in either native or rendered PDF format, the Third Party may provide a scanned version of the document once they receive approval from VGLNG for this as an exception. The scanned document will be submitted by Third Party to VGLNG in PDF.

Note: Other scanning output formats will be rejected.

Scanned documents shall utilize OCR (Optical Character Recognition). Scanned documents should be of good quality, sized and oriented to match the original document, legible. If the original document contains color, the scan shall also be delivered in color. The scanned dpi should not exceed 600 dpi. VGLNG reserves the right to reject illegible or excessively large scanned PDF files.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

If a document is scanned without OCR, the document should be edited in Adobe Acrobat and the OCR option selected to ensure the text in the document is searchable.

7.16.3 PDF Format

All PDF files must be text-searchable.

Fully text-searchable PDF file formats will be acceptable where the native file format is not available (ex: off-the-shelf supplier documents). It is VGLNG's recommendation that PDF files be "rendered" PDF's (i.e. generated to PDF format from the native application) wherever possible in lieu of scanning documents.)

Tools such as Adobe Acrobat may be used to render native files into a PDF file. Files that are converted from the native format to PDF have superior legibility. Converted PDF files must be as legible as the native version. PDF files must contain the same colors, markups, lines, etc. as found in the original document.

Documents that are created in color should be rendered to a color PDF. All colors shall be visible on a white background PDF drawing.

PDF files delivered by Third Parties to VGLNG shall not:

- Be encrypted
- Require Passwords for opening
- Contain any security settings that prevent the opening, copying, printing, extraction or document assembly actions (inserting, deleting, rotating pages or creating bookmarks/thumbnails)

7.16.4 Paper Books

If VGLNG determines that specific paper books will be required, the Third Party will deliver identified documentation in book format, (e.g. Manufacturer's Record Book). The paper documents in the books should clearly show all signatures and/or PE stamps as applicable. Reference: "Documents for Operations (DFO) Requirements Specification", VG-000000-INF-SPC-VGL-00002, for more information.

7.16.5 Native / PDF Format

During the early stages of the document lifecycle, PDF formats are acceptable for most documents.

Documents for Operations (DFO) Requirements Specification outlines the types of documents that fall into the FD7 category. All FD7 documents will be submitted to company in NATIVE file format.

VGLNG reserves the right to request Native formats from the Third Party at Issued for Design (IFD), Issued for Construction (IFC) and later stages.

7.16.6 Document Control

As a minimum requirement, the VGLNG document number shall be visible on the first page of the document. The number may be displayed in the document title, drawing title block, or cover sheet. On MS Word documents, it is VGLNG's preference that document number be shown on each page in a header and/or footer.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

The VGLNG Revision, Revision State, Revision Date and first letter of the first name and last name of the document author should be noted on the first page of each document delivered to VGLNG.

Each document should contain a clear, unique and meaningful title. Titles should not exceed 150 characters.

Multi-page, single file drawings should contain a sheet number at the end of VGLNG document number. Each page within the drawing package must display the same VGLNG document number.

Documents should contain the VGLNG Logo.

If a document submitted by a Third Party contains a reference to another document, the reference should include not only the document title, but the VGLNG document number.

7.17 Electronic Files (Individual and Compound/Grouped Documents)

7.17.1 Individual Files

Document deliverables shall be provided as individual files. Each electronic file delivered to VGLNG shall contain only one (1) document per file.

Zip files are not considered to be individual files as they have the contents of many individual documents.

Multiple individual files brought into a single format (such as PDF) are not acceptable for electronic delivery.

Single sheet drawings shall be delivered as individual documents. When a drawing set has multiple sheets, each drawing sheet shall be delivered as individual files for the following drawing types only.

INDIVIDUAL DRAWING SHEETS REQUIREMENTS			
DRAWING CODE	DESCRIPTION	DRAWING CODE	DESCRIPTION
CEF	Cause & Effect Diagram	PLT	Plot Plan
FGD	Fire & Gas Detection Locations	SLN	Single Line Diagram
GRD	Grading	SSD	Substation Diagram
HAZ	Hazardous Area Classification	SST	Structural Steel Drawing
PFD	Process Flow Diagram	UFD	Utility Flow Diagram
PID	Piping & Instrumentation Diagram		

NOTE: Multi-sheet drawings for all other drawing types NOT listed above may be submitted as one file and may carry a cover page. Multi-page drawings submitted as a single file are required to have the VGLNG document number, revision and security classification on each page.

See the document numbering procedure for guidance on how to number individual vs. grouped (multi-sheets in single file) drawing sets.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

7.17.2 Compound/Grouped Documents

Document types that may be grouped into a single PDF file format (e.g. Compound Documents) include but are not limited to: Databooks, Manufacturer's Record Books (MRBs), Supplier Databooks, Construction Work Packages, Installation, Operations and Maintenance Manuals (IOM's), etc. Hereafter, such document types will be referred to as simply "Databooks".

Note: Additional document types being put in into Compound Documents must be approved by VGLNG prior to delivery.

Compound documents shall contain a table of contents and digitally bookmarked sections. VGLNG provides the requirements for the assembly of paper and/or digital Databooks in "Documents for Operations (DFO) Requirements Specification".

Drawing Packages for Isometrics (ISO), Foundation Diagram (FND) and Loop Diagrams (LOP) shall be grouped in a single PDF file. This will prevent the large volume of these being submitted as individual documents.

NOTE: if any drawing or diagram is revised inside of a submitted package the entire package will be revised and resubmitted.

- Third Party contractor should take steps to reduce large file sizes by running a compression or optimization process in the corresponding application
- The file sizes of the PDF Drawing Packages shall not exceed 1GB per file
- Where a Drawing Package exceeds the 1GB file size limitation, it must be broken into separate packages using the next sheets number for the VG document number
- A break in Drawing Packages must follow the Drawing Index clearly
- Drawing Index must list the entire contents of the Drawing Package set
- Drawing Index for multi-sheet Drawing Package must highlight the pertinent sections that are included in that specific Drawing Package sheet number.
- Multi-sheet Drawings Package titles will remain consistent throughout the set, adding "Sheet 01 of XX" at the end of the title for each volume
- Document numbering for Multi-sheet Drawing Packages will utilize a three-digit numeric character code after the sequence number, as consistent with drawing numbering. The sheet number will begin with -001 and continue with the next sheet number in sequence as files sizes require. Please see the VG Document Numbering Procedure for addition details
- Refer to section 7.20 for language requirements

7.17.2.1 Requisitions and Work Packages

Documents related and referenced within requisitions and/or work packages should not be attached/appended to the document file. All related and referenced documents shall be listed in a table showing the VG Document Number, VG Revision and Title.

7.17.2.2 Databooks and Manuals

The delivery of Project Databooks in accordance with this specification is the responsibility of the Third Party Contractor. Third Party Contractor may elect to provide this specification and/or pass the respective requirements to their suppliers so the Databook preparation is

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

done by sub-contractors and/or suppliers. However, Third Party Contractor carries the overall responsibility for the Databooks' accuracy, completeness and timeliness. The Databook Table of Contents (TOC) that will be created by Third Party Contractor shall be submitted to VGLNG for approval prior to the Databook assembly.

General Requirements:

- Databooks will be generated in Portable Document Format (PDF)
- Each Databook and volume will contain a cover page and TOC upon opening the PDF
- Databooks shall be bookmarked according to the TOC sections and VGLNG document numbers as applicable
- Databook shall contain a footer of VGLNG Document Number, Revision and security classification on each page.
- Databooks shall be fully text searchable
- Scanned pages contained in the Databook shall be processed through OCR (Optical Character Recognition) to ensure text searchable capability and each page must be legible with the correct orientation
- Third Party contractor should take steps to reduce large file sizes by running a compression or optimization process in the corresponding application
- The file sizes of the PDF Databooks and manuals shall not exceed 1GB per file
- Where a Databook or manual exceeds the 1GB file size limitation, it must be broken into volumes and each volume shall be identified by a volume number
- A break in volumes must follow the table of contents clearly
- TOC must list the entire contents of the Databook volume set
- TOC for multi-volume Databooks must highlight the pertinent sections that are included in that specific volume
- Multi-volume Databook titles will remain consistent throughout the set, adding "Volume 01 of XX" at the end of the title for each volume
- Document numbering for Multi-volume Databooks and Manuals will utilize a three-digit alpha-numeric character code after the sequence number to identify the volume number, for example: -V01, -V02, -V03. For single file/volume Databooks, the three-character code will be -V01. Please see the VG Document Numbering Procedure for addition details
- Refer to section 7.20 for language requirements

In the instance that an individual document deliverable has been submitted into VGLNG EDMS as a stand-alone document, and is also included in a compound document, Third Party contractor is responsible to ensure that the latest revisions of such documents are aligned in both instances.

When a previously submitted compound document is to be revised contractor may need to 1) Revise the entire volume set, 2) Revise only the effected volume 3) Revise and create a -V01 and -V02 if the revised documents is now in excess of 1GB. The original single file will be superseded with the -V01

7.17.3 Electronic File Naming Requirements

Third Party will follow the following File Naming Requirements:

- The VGLNG Document number shall be used as the file name for all documents

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

- File names shall not contain special characters. Examples: !, @, #, \$, %, ^, &, *, (,), +, ~, ' , " ,
- File names of the electronic files shall remain the same with each revision
- File names shall not contain the revision of the document. The Revision will be stored in the EDMS as a separate attribute
- File names shall not contain dates. The version and Revision Dates of the document will be stored in EDMS as a separate attribute

7.18 File Types

During Project Execution pdf is the preferred format for all document with the exception of Excel spreadsheet, both native and pdf should be provided. Standard acceptable formats for electronic documents are listed below:

- Microsoft file formats shall be in Office 2013 version or later
- MS Word
- MS Excel
- MS Project
- MS Access
- MS PowerPoint
- MS Visio
- MP3 is the preferred audio file format
- MPEG-2 is the preferred format for video files
- JPG - Format for photos
- CAD 2D - Drawings are to be delivered in AutoCAD format (DWG) release 2010 or greater
- CAD 3D - Intergraph 3D
- HYSYM - Process Design Model
- Adobe Acrobat Portable Document Format (PDF) (version 10 or greater)

7.19 File Sizes

Smaller file sizes provide for easier opening and faster sharing of information. Third Parties should take steps to reduce large file sizes (i.e. Optimization option in Adobe). No file shall exceed 1GB in size.

7.20 Language

Documents will be delivered to VGLNG in USA English Language and Fonts unless specific exceptions are agreed in advance by VGLNG. Documents may contain other language translations, but these documents must also contain English as a minimum.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

7.21 As-Built

To ensure compatibility with VGLNG Operations business requirements and provide accurate representation of the designed, fabricated/constructed and installed facilities, VGLNG will require specific documents and drawings to be submitted as As-Built. Reference: “Documents for Operations (DFO) Requirements Specification”.

As-Built is defined as: “Documentation where mark-up information has been formally incorporated into a new revision of the original document according to individual requirements for each project.”

As-Built drawings shall be delivered to VGLNG in the Native CAD format (Scans of marked up drawings following construction are not acceptable as the final As-Built deliverable). As-Built drawings are considered final documentation and must be also submitted with a rendered PDF file at delivery.

When a drawing is revised to As-Built, all previous revision clouds and triangles shall be removed on the final issued drawing.

For a list of documentation to be delivered “As-Built”, see “Documents for Operations (DFO) Requirements Specification”.

Prior to submitting As-builts, Third-party contractor must maintain a master set of redlines and a redlines register and make those available to VGLNG via means previously approved by VGLNG DC for record. The detailed process is to be determined jointly between VGLNG and Third-Party contractors for each Project.

7.22 Cross Referencing Drawings / Documents

If external references are used within documentation generated for VGLNG, they shall include the VGLNG document number and title of the referenced document. For drawings, references can be listed in the Notes section. For drawings within a set, the references need only to appear on the main layout and arrangement drawing.

8 VGLNG BASIS DOCUMENTS

VGLNG will transmit the VGLNG Basis Documents to Third Parties. These documents may include: VGLNG Standards, Specifications, Procedures, Basis of Design, and other documentation for the Third Party to utilize to meet the needs of VGLNG.

9 DELIVERY OF DOCUMENTS

Individual documents will be transmitted at each specific document VGLNG Revision State, to VGLNG DC. Documents from Third Party will be delivered to VGLNG and accompanied by a submittal to ensure the official capture of the document receipt.

Delivery of documents from the Third Party team members to individual VGLNG employees is considered “uncontrolled” and will not be recognized as official receipt of documents unless officially issued to the VGLNG DC by submittal.

Categories of documentation to be delivered to VGLNG and general guidelines are outlined below.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

9.1 Technical Information (DOC, DWG)

CAD files - will be delivered to VGLNG at multiple document lifecycle stages. For the early stages of the drawing development (example: IFR, DRAFT, IFA, and HAZOP) a PDF format may be delivered. Final revisions of all drawings shall be delivered with BOTH the Native CAD format and PDF rendered files.

Engineering Documentation - will be delivered to VGLNG at the point where VGLNG reviews/comments, accepts the documentation, and at the Final issue of the completed documentation.

Supplier Documentation - will be delivered to VGLNG at the point when such documents have reached a Final issue of the completed documentation.

Note: VGLNG may request a PO List from the Third Parties to determine if there is any Supplier documentation that should be submitted to VGLNG for review before documents are finalized.

3D Models and Simulation files - will be delivered to VGLNG at the end of the project in an As-Built state in the native database format and in a viewer format. A cover page should accompany these files in Hexagon (NOTE: Preliminary 3D models may be provided to VGLNG prior to project completion as required by the project).

9.2 Correspondence (COR)

Correspondence documents will be numbered in accordance with VGLNG Document Numbering Procedure and submitted to VGLNG via the EDMS. Access will be enabled for Third Parties to place correspondence documents in the EDMS.

Note: Confidential or sensitive Correspondence related to Cost, Personnel information, Safety Incident, etc. should be provided to VGLNG through a confidential folder in the EDMS. Please contact the VGLNG DC or EDMS Administrator for assistance on setting up confidential correspondence folders.

Letters, Minutes of Meetings, Action Items, and Letters - will be delivered to VGLNG at the time of issuance. Minutes of Meetings and Action items should be issued to VGLNG within 3 business days of the meeting.

Submittal - shall be delivered to VGLNG along with the issued documents. The preferred file exchange between Third Party and VGLNG is VGLNG's submittal loadsheet that automates the file transfer into VGLNG EDMS. As a minimum the Third Party will provide their submittal to VGLNG.

9.3 Project Management – Business Information

.Project Management and Business documents - will be delivered to VGLNG DC at the time of issuance. Examples of Project Management documents are: Project Execution Plan, Scope of Work, Design Basis, etc. Examples of Project Services documents are: Schedule, Budget, Estimates, Forecast, Progress reports, etc.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

10 DOCUMENT DELIVERABLES

All documents generated and provided to VGLNG are considered to be deliverables. Examples of document deliverables include but are not limited to:

Master Document Register (MDR)	Drawings
Data Sheets	Specifications
Procedures	Calculations
Equipment list	Requisition List
Purchase Orders (unpriced)	Purchase Order Register
Memorandums	Minutes of Meetings
Letters	Reports
Transmittals	Request for Information (RFI)
Quality Reports	Supplier documents

11 THIRD PARTY DISTRIBUTION OF DOCUMENTS TO OTHER COMPANIES

Third Party shall not transfer drawings and/or documents to other companies unless contractually authorized by VGLNG to do so. Example: Third Party who will be utilizing subcontractor companies or suppliers may share documents for engineering and construction if VGLNG authorization has been given.

Third Party shall not share VGLNG drawings and documents across other projects unless previously agreed with VGLNG.

If a Third Party has subcontracts with other companies or is procuring on behalf of VGLNG through an approved supplier, the Third Party is responsible for assuring the contracted suppliers and/or subcontractors follow the VGLNG requirements for documentation.

12 CONFIDENTIALITY STATEMENTS

Documents created by Third Party on behalf of VGLNG should not contain Third Party copyright or confidentiality statements unless agreed by VGLNG.

13 ATTRIBUTES ON VGLNG SUBMITTAL TEMPLATE

Third Party is encouraged to configure their internal electronic document management system (EDMS) to contain the attributes required by VGLNG. The VGLNG submittal template and/or Master Document Register (MDR) will be used to provide attribute values to VGLNG. Instructions will be provided to Third Party after contract award on how to populate these templates for submission to VGLNG.

Upon receipt by VGLNG, the attribute values on the submittal template will go through a QA check by VGLNG DC for completeness and accuracy. Inaccurate attribute values may result in the rejection of the submittal with the requirement for the Third Party to correct and resubmit the submittal and associated documents as required.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

14 SIGNATURE / STAMPS

14.1 Signatures

Digital signature tools such as Adobe Acrobat may be used to sign technical engineering documents. VGLNG DC prefers the receipt of documents and drawings with digital signatures in lieu of scanned documents containing wet signatures.

If wet signatures are used, the Third Party shall provide the scanned copy of the document containing the wet signatures into a PDF format as part of the original document. This PDF file shall be scanned with OCR technology to ensure that the document has full-text search capability.

Where signatures are on specific pages of a document, the recommendation is to scan only the signed pages and insert them into the rendered PDF file in lieu of scanning the entire document to ensure the best readability of the document.

Third Party shall provide proof of signature and/or technical authorization for all documents that are issued to VGLNG with numeric revisions.

14.2 Signature Index

Third Party shall provide a Signature Index to VGLNG. This index will provide a list of all approved signers. It shall include the approved signer's full name, title, initials and image of the signatures/initials to be used on VGLNG documents. This signature index will be used to identify the signers throughout VGLNG. As new team members join/leave VGLNG the signature index shall be updated accordingly.

Note: Where initials are used on VGLNG documents, the initials should be unique and not repeated for clarity.

14.3 Acceptance Status Stamps

VGLNG will use their EDMS Red-lining Tool to provide comments to Third Party on documents routed for review and comment. Reviewed documents will be returned to Third Party with an Acceptance Status Stamp on the document. [See Section 16.2](#) for a list of Acceptance Status Codes.

14.4 Engineering Stamps

A Professional Engineer (PE) Stamp may be used on specific types of documents. VGLNG prefers the use of electronic PE stamps where possible. If a paper document is stamped with an embossed PE stamp, the document shall be delivered to VGLNG after the stamp has been applied in a paper format containing the stamp as well as the scanned PDF format.

PE stamped documents in PDF format, should not be password protected, and or combined into a single file containing multiple documents that have individual document numbers.

15 DOCUMENT QUALITY ASSURANCE

VGLNG DC will perform Document Quality Assurance (QA) activities against documents received from Third Party. The Quality Assurance Check will be based upon the “VG LNG Document Control QA Standards”. If errors or missing information is discovered during the quality assurance activities, VGLNG will notify the Third Party. The Third Party is requested to fix the error and resubmit the documents within 3 business days.

16 VGLNG DOCUMENT REVIEW AND COMMENT PROCESS

The VGLNG review and comment process will be done in the EDMS. The EDMS provides for the routing of documents to VGLNG employees for electronic markups and comments. Prior to submittal of documents to VGLNG for review/comment, Third Party shall ensure document(s) have been subjected to Third Party internal review processes and have been approved for client review within the Third Party organization.

16.1 Review and Comment Process

The method for VGLNG Review and Comment process will be in the VGLNG EDMS. In the EDMS, documents will be routed to VGLNG employees for review/comments based upon the VGLNG Document Distribution Matrix.

In the EDMS, recipients will be notified if they have actions for:

- Review and Comment
- Consolidate Comments
- Document Acceptance

The VGLNG Review process assures that the document is in alignment with VGLNG requirements and is in agreement with the project scope of work. The VGLNG review does not relieve the Third Party of responsibility for the technical accuracy of the documents.

Documents sent to VGLNG for review (Review Category 1 review) shall not be issued to VGLNG at new revisions until the review process has completed and VGLNG has returned the documents to the Third Party.

When the Review/Comment process has been completed, VGLNG DC will transmit the document containing the “Acceptance Status Code” and any comments back to the Third Party.

16.2 Acceptance Status Codes

VGLNG will assign to each of the Third Party documents one of the following codes:

Code 1 - Accepted - The documentation is acceptable and all VGLNG comments, if any, on previous submissions have been incorporated. If the revision code is alphabetic, the accepted document will be sent to Third Party from VGLNG. Third Party shall update the revision of the document to the next numeric revision code and revision state (as applicable) and return to VGLNG.

VENTURE GLOBAL LNG Document No.: VG-000000-INF-SPC-VGL-00003	Information Exchange Requirements Specification	Revision: 4
--	--	-----------------------

Code 2 - Accepted with Comments - Instruction to Third Party is to proceed with work. The Third Party shall incorporate the comments, update the revision of the document to the next numeric revision code and revision state (as applicable) and return to VGLNG. VGLNG will perform an abbreviated review to ensure Code 2 comments were incorporated appropriately into the numeric revision.

Code 3 - Not Accepted, Revise and Resubmit - Instruction to Third Party to stop work on affected areas pending incorporation of the comments. The document will be returned to Third Party from VGLNG. Third Party shall update the document and resubmit to VGLNG. Work may NOT proceed.

Code 4 - For Information Only - The document submitted by Third Party to VGLNG for review. The determination is made by VGLNG to not review the document and return it to Third Party. The Third Party shall revise the revision code to the next numeric code and submit with the Revision State of "Issued for Information".

16.3 Review Period

The planned review/comment period for VGLNG to provide comments back to the Third Party is 10 business days, unless otherwise specified on their contract. It is recommended that a new revision is not submitted by Third Party within 14 calendar days.

Third Party (Contractor) is required to revise and resubmit documents within 10 business days from the return of VGLNG comments, unless otherwise specified on their contract.

16.4 Review Categories

Third Party will issue documents to VGLNG based upon the review categories identified on the MDR. VGLNG employees will assign the review category for documents on the MDR.

The Review Categories are shown below:

Review Category 1

Category 1 documents are to be submitted for review and acceptance to VGLNG. They shall be submitted for review at each revision. Comments provided by VGLNG shall be resolved to the satisfaction of VGLNG. Category 1 documents address items that are critical to the safety, functionality and regulatory compliance of the work.

Review Category 2

Category 2 documents are generally not required to be Reviewed and Accepted by VGLNG and should be sent to VGLNG Issued for Information.

17 DOCUMENT COVER PAGE AND TEMPLATES

Various VGLNG templates are available from the VGLNG DC. TPDC is encouraged to place these templates for use in their system for the Third Party team.

17.1 VGLNG Document Template

Third Parties preparing Project Management documents (Ex: Procedures, Reports, Studies, Practices, etc.) should utilize the VGLNG Document Template.

17.2 VGLNG Spare Parts Listing Template

Third Parties preparing SPIL and SPIR master data that will be uploaded into VGLNG's CMMS should utilize the VGLNG Spare Parts Listing template (VG-000000-MMS-SPR-VGL-00001).

18 SUPPLIER GENERATED DOCUMENTS AND DRAWINGS

Supplier-generated documents and drawings may be delivered to the Third Party that places Purchase Orders on behalf of VGLNG or directly to VGLNG for VGLNG originated purchases.

Third Party is responsible to ensure that their Suppliers, Sub-suppliers and subcontractors deliver documents and drawings in accordance with this specification and the VGLNG Document Numbering requirements. Each Supplier Document and Drawing will carry the VGLNG document number, Revision Code, Security Classification, and Acceptance/Approval stamp. Additionally each Supplier Document and Drawing will carry the Supplier Name, Project PO number, and Supplier Document number. This information should be applied on the cover page* and/or the footer in order to be submitted to VGLNG.

The responsibility for the receipt and management of Supplier Documents will be with the Third Party placing purchase orders on behalf of VGLNG or as agreed between VGLNG and Third Party.

In all instances, the documents and drawings must comply with the requirements set forth in this Specification and associated VGLNG IM standards.

*VG will provide a Supplier Document Cover page if needed

19 FINAL INFORMATION HANDOVER

Third Party will prepare documentation that will be delivered to VGLNG DC over the project lifecycle. As milestones and major scopes of work are completed, VGLNG DC is responsible to handover documentation to VGLNG document owners. To fulfill the Handover requirement in a timely and efficient manner, it is crucial that Third Party organizations deliver documentation and the related attributes throughout the lifecycle and before completion occurs.

20 MONITORING AND MEASURE

20.1 Key Performance Indicators

The Third Party will issue reports to VGLNG for typical Document reporting and document completion status. Example reports include:

Metric Name	Description	Frequency
Document status reports	Bi-weekly document status reports based on the information from Third Party MDR so that VGLNG can review the overall document management progress	Weekly / Bi-weekly
Status of tagged equipment	Monthly reports from Third Party engineering database regarding the status of tagged equipment	Monthly
